

Using Ajax in jQuery

1. Modify `static/sio.js` to generate an Ajax GET request to `/sio/get-courses` to get the course data and update the HTML course list
 - a) Generate an Ajax GET request to our API.
 - b) Use our JavaScript helper function (`updateChanges`) to update the DOM using the result of the API call.
2. Generate an Ajax POST request to `/sio/create-student`, etc, with the data from the respective form.
 - a) Extract data from the HTML form to create a JavaScript object representing the form data. Hint: See the jQuery `serialize` and `serializeArray` functions.
 - b) Generate an Ajax POST request to our API from the form data.
 - c) As above, use `updateChanges` to update the DOM.
