

# Using Ajax in raw JavaScript

1. Modify `fortune.html` and `fortune.js` to set the `#content` paragraph text when the button is clicked.
  - Our fortune server runs on <http://garrod.isri.cmu.edu/webapps/fortune/>
  - Hint: Understand the example in `Ajax To-Do List/shared_todo_list/static/js/todo.js`
  - Good practice: Use an anonymous function for the response-handler to eliminate the globally-scoped `req` variable
