Web Application Development

Getting user interaction feedback

Charlie Garrod

School of Computer Science
Carnegie Mellon University

Perform a "think-aloud" study:

In pairs: Using your Homework 5 solution, get usability & design feedback.

1.   Give a set of specific tasks for your application.

   •   One task at a time

2.   Have user talk through their activity.

   •   Write notes as you observe their usage

3.   Separately debrief afterward.
